PRODUCT DETAILS

Label Claim	:	**Each MCG Tube Contains: Miconazole Nitrate 2%, Clobetasol Propionate 0.05%, Gentamycin Sulphate0.1% w/w.** Colour: **White Smooth Cream**
Shelf Life	:	**2 years**
Storage Conditions	:	Store in a cool & dry place. Protect from direct light, heat and moisture.
Mfg. License Nos.	:	NDA/MAL/HDP/2896
Brand Name /Product Name	:	**MCG**
Required Batch Size	:	8,000 Tubes
Market	:	**Domestic/Local**
Average weight (Net Content)	:	15.0gm
Dissolution	:	NA
Assay:	:	**Percentage Limit** (90.0 % to 110.0 % of the Label claim)

GENERAL INSTRUCTIONS

1. Use approved Equipment only, mentioned in respective stages of the BMR.
2. All Equipment for use must be duly cleaned as per respective SOPs and approved by QA.
3. Each container, machinery or Equipment must bear Status indicating label, duly signed by the person responsible.
4. All Equipment used, must have appropriate safety measures.
5. Care should be taken to ensure that all manufacturing Operations are performed as per the process under supervision of competent technical staff, workers should wear nose masks, and clean gloves, gowning throughout the manufacturing and packing operations.
6. Ensure that all the ingredients have Release labels for intact containers and proper A. R. Nos. for loose containers.
7. Ensure the materials are dispensed and checked as per respective SOPs and FIFO / FEFO system is followed.
8. Dispensing materials should be done in presence of three qualified people, 1 from stores, 1 from Q.A. and 1 from production.
9. Observe the atmospheric conditions mentioned at various steps, in the BMR.
10. Dispensing labels shall be affixed with BMR.

SAFETY PRECAUTIONS

1. Safety Precautions to be taken to avoid explosions in FBD during drying.
2. Safety Precautions must be taken during grinding, milling, granulating process.
3. Protect Respiratory Organs by using cloth masks and gloves during manufacturing process.
4. Follow personal hygienic requirements.
5. To avoid any accident, check the earthing and continuity of electricity while operating the machine.
6. Check the safety mechanisms at the start of the operations, at the end of operations, after power failures and any breakdowns of the machine.
7. **Material Transfers: -**Transfer all the dispensed materials from stores to manufacturing areas. Counter-check and record identities and weights of all the ingredients received. Do not use any material which does not comply with weight or analytical report (AR) numbers.

Storage of Materials: -Store the material, in process material, semi-finished and finished material in designated area properly labeled mentioning status of the material and batch details.

NOTE: Ensure all the SOPs used for references in the BMR are of current versions.

GENERAL SOPS IN MANUFACTURING RESPECTIVELY.

DISPENSING

LINE CLEARANCE FORM

Previous product:			**Batch No:**	
BEGINNING ACTIVITIES: The following must be checked to ensure adherence to GMP requirements.	**Done by Operator** (Sign & Date)	**Checked by Supervisor** (Sign & Date)	**Verified by** **QA** (Sign & Date)	**Status**
1. Area cleaning is done as per SOP.				
2. Ensure the absence of batch documents, labels, materials or remnants of previous product or batch.				
3. Ensure availability of the BMR for the in-coming batch and Verify that **ALL** materials and facilities for new batch are available, labeled and identified.				
4. Gowning and de-gowning procedure is followed.				
5. Dispensing Room, Dispensing booth, Balances and dispensing tools are clean and have status as ready for use.				
6. Clean scoops, containers and poly bags are available for dispensing as per SOP.				
7. Manometer reading of dispensing booth RLAF is within the required limit. Actual Manometer reading:				
8. Balance Calibration carried out before starting dispensing.				
9. Verify the release status & retest validity period of each material.				
10. Ensure Environmental conditions are met as per SOP. Temperature NMT 28 ^{0}C ______________ Relative Humidity (40-65)% ______________				
11. Ensure that the RLAF is started 15 minutes before start of the dispensing activities.				
Remarks:				
ENDING ACTIVITIES: The following must be checked to ensure adherence to GMP requirements	**Done by Operator** (Sign & Date)	**Checked by Supervisor** (Sign & Date)	**Verified by** **QA** (Sign & Date)	**Status**
1. All material from current product have been removed.				
2. All facilities have been cleaned and labeled.				
3. The area has been cleaned and labeled.				
4. All paperwork for the current batch has been completed.				
5. Reconciliation of current batch has been done.				
6. Ensure that utensils and accessories from previous operations have been removed.				
Remarks:				

MIXING & HOMOGENIZING

4. All paperwork for the current batch has been completed.				
5. Reconciliation of current batch has been done.				
6. Machine(s) has been checked for cleanliness.				
Remarks:				

MIXING & HOMOGENIZING

1. Equipment used for Mixing

Equipment Name	Equipment ID No.	Mark (Equipment used)
Planetary Mixer	ON-01	
Colloidal Mill	ON-04	

2. All equipment must be thoroughly cleaned and dried as per SOP before use. Analytical Report Nos. (A.R. No.) must be counter checked before starting the manufacturing process.
3. In cleaned Planetary Mixer, add in sequence.
   a. **39.84kg of White Soft Paraffin**
   b. **6.00kg of Cetomacrogol 1000**
   c. **14.04kg of Cetostearyl Alcohol**
   d. **12.67kg of Liquid Paraffin**
4. Set the jacket temperature at 70 °C and heat until most of the solids have melted then mix at slow speed for 10 minutes.

Start time	Completion time	Time taken	specifications	Deviation	Done by Operator **(Sign & Date)**	Checked by Supervisor **(Sign & Date)**	Verified by QA **(Sign & Date)**

5. Triturate in a clean separate vessel until a smooth, uniform mixture is formed then add to the planetary mixer in step 4 above:
   a. **120.00g of Gentamycin Sulphate**
   b. **60.00g of Clobetasol Propionate**
   c. **4.93kg of Liquid Paraffin**
6. Take 5.0 litres of purified water in a separate vessel and dissolve **2.4kg of Miconazole Nitrate**. Add the solution to the planetary mixer in step 4 above.
7. Heat the remaining **34.2 Litres** of purified water in a clean separate vessel to 80 °C and dissolve.
   a. **140.0gm of Sodium Acid Phosphate**
   b. **600.0gm of Chlorocresol**
8. Add the solution to the planetary mixer in step 4 above and mix for 30 minutes with the emulsifier on.

Start time	Completion time	Time taken	specifications	Deviation	Done by Operator **(Sign & Date)**	Checked by Supervisor **(Sign & Date)**	Verified by QA **(Sign & Date)**

9. Cool the cream to 40 °C and intimate QA to take a sample to QA IPQC lab for Physical Appearance Check.

MIXING & HOMOGENIZING

QA REPORT

Quantity sampled	……………………………………g
Sampled by **QA** ……………………………………...	
TEST	SPECIFICATION
Appearance of the Cream	**White Smooth Cream**

The samples **Comply** ☐ **Do not comply** ☐ With the above specifications.

QA Officer: (sign)……………………...……………………………… Date…………………………

Release procedure: Yes / No

If the above tests fall within the specified limits, QA fills out and labels the blender with "PASSED" label and the material is sent to the next processing stage.

Rejection procedure: Yes / No

If the material fails any of the above tests, QA fills out and labels the blender with "REJECTED / REWORK" label and the material is sent for reworking.

After QA approval, transfer the Cream to the Filling Machine No.________ maintaining the hopper temperature at 40 ^{o}C

TUBE FILLING

LINE CLEARANCE FORM

4. DETERMINE PERCENTAGE YIELD

YIELD RECONCILATION

Steps	Descriptions	Qty. (Kg)	Done By SPV (Sign & Date)	Verified By QA (Sign & Date)
A.	Theoretical Batch Size			
B.	Actual Quantities of Tubes Filled			
C.	Sample Quantities (In-Process checks)			
D.	Validation Samples			
E.	Rejects (if any)			
F.	Total Actual Yield (B+C+D)			
G.	Unaccountable Losses [A-(E+F)]			
	Percentage Yield =F x100/A =……………………%			

Permissible Yield Limit: (99% to 101%)

(If percentage yield is within 99% to 101% no justification is required, otherwise explain variation in space below):

CAUSE OF VARIATION: YES/NO

REMARKS/BREAKDOWNS……………………………………………………………………………

……

……

PROCEDURE:

1. Bring in the collapsable tubes for filling.
2. Set and operate the tube filling machine as per SOP for operating the machine.
3. Check the first code on the crimp for correctness and legibility and seek approval from Supervisor before proceeding. Fill the tubes.
4. Reconcile the yield against the Batch Size

LINE CLEARANCE FORM				
Previous product:		**Batch No:**		
BEGINNING ACTIVITIES: The following must be checked to ensure adherence to GMP requirements.	**Done by Operator** (Sign & Date)	**Checked by Supervisor** (Sign & Date)	**Verified by** **QA** (Sign & Date)	**Status**
1. Area cleaning as per SOP.				
2. Check out all the previous product containers, material, labels are removed from the manufacturing area.				
3. Gowning procedure is followed.				
4. Ensure that status board is displayed with mentioning Product Name, Batch No, B. Size, Mfg. Date, Exp.Date & Status with sign & date.				
5. Check the proper cleanliness of the Air Supply and Return grills and Air Conditioning System.				
6. Remove all the cartons, labels, tubes, any material left over on the line and on the lower space of the conveyor belts.				
7. Put an authorized overprinted specimen of cartons/Label/Tube in the BMR for ready reference.				
8. Ensure Environmental conditions are met as per SOP. Temperature NMT 28 ^{0}C _____________ Relative Humidity (40 to 65%) _____________				
Remarks:				
ENDING ACTIVITIES: The following must be checked to ensure adherence to GMP requirements	**Done by Operator** (Sign & Date)	**Checked by Supervisor** (Sign & Date)	**Verified by** **QA** (Sign & Date)	**Status**
1. All material from current product have been removed.				
2. All facilities have been cleaned and labeled.				
3. The area has been cleaned and labeled.				
4. All paperwork for the current batch has been completed.				
5. Reconciliation of current batch has been done.				
6. Stereos of previous product are submitted to production Supervisor.				
Remarks:				

PACKAGING

1. PACKING PROCESS & INSTRUCTIONS

1. Ensure that the packing room, packing equipment and packing table(s) are clean.
2. Carry out a Packing line clearance exercise as per SOP for line clearance and complete the "beginning 2 activities" section of the record.
3. Check and ensure the weighing scale has been cleaned and calibrated as per SOP for cleaning and 3 calibration.
4. Bring in the appropriate packaging material.
5. Place the tube with the patient information leaflet in the unit carton.
6. Put 10 tube cartons in poly bags and seal.
7. Pack 40 sealed bags in a shipping carton.
8. Seal the shipping carton with packing tape.
9. Label the shipping carton appropriately.
10. Complete the packing records.
11. Complete the "Ending activities" section of the packing line clearance form.
12. Transfer packed goods to Finished Goods Quarantine Store.

9	Coding Reconciliation:		
	Name of item:		
	No. of item issued:		
	No. of item coded:		
	No. of item uncoded:		
	No. of items damaged / rejected during coding:		
	No. of items used:		
	No. of excess items, if any:		
	No. of item to be destroyed (**with QA consent**):		
	Reconciliation approved by: **QA (Sign & Date):**		

SECONADARY PACKAGING

SECONDARY PACKING PROCEDURE

1. Check the specimen attached to the BMR of overprinted carton/Monocartons, leaflet, and shipper label if it has been checked by the line supervisor and approved by the QA Officer online.
2. Transfer previously approved overprinted packing material from the printing room to the secondary packing room.
3. Check if displayed details on the carton/Monocartons/dispensers of the batch number, manufacturing and expiry date are as per BMR/BPR. Check carton for overprinting intactness.
4. Check if the information on leaflets/inserts is clear, legible and specific to the product to be packed.
5. Open the carton and insert leaflet as specified in the BMR. Close the carton and arrange it into the shipper.
6. Once the shipper is filled with the number of cartons as specified in the BMR, insert a fully filled packing slip with name of the product & batch number, the name of the packing personnel and this should be checked and signed by the group leader.
7. Group leaders should check the shipper to ensure that it has the correct quantity of cartons/Monocartons/dispensers. If this is okay, group leader shall sign the packing slip and intimate to the Supervisor and QA Officer online to confirm the correctness of the quantity in the shipper and other packing requirements. The Supervisor and the QA officer shall then sign on the packing slip and authorize the group leader to seal the shipper with BOPP tape and attach the shipper label. Exact quantity of loose shipper is written on shipper label and sealed.
8. Once the entire batch has been completed, transfer to finished product quarantine store.
9. Any leftover printed cartons/Monocartons/dispensers/labels should be destroyed in presence of QA Officer online and the number recorded in the BMR.
10. Transfer leftover packaging material (that is not printed on) to Packaging Material Stores with a return note.

REVISION HISTORY

REVISION NO.	CHANGES INCORPORATED	REASON OF CHANGE	EFFECTIVE DATE
01	1. KPI new logo to be incorporated 2. The provision for BMR preparation, Review, Approval and Authorization have been introduced on the Master Formula Page(s). 3. An Index has been introduced. 4. The Abbreviations used in the BMR have been defined in full. 5. List Of Equipment & Instruments used in product manufactured have been summarized. 6. Line Clearance for Dispensing previously missing has been introduced. 7. Documentation of First Drying, Second Drying, and Final Drying have been split and captured independently, and Milling activities including Sieves used plus LOD data are also being documented at granulation. Identity of the FBD used to dry a particular Lot has been captured. 8. In-process Quality Control and Assurance (IPQC/IPQA) reports for both Production and QA at all stages (as appropriate) have been incorporated. 9. Initial Compression Machine Setting instructions, Initial Dies and Punches Checking Record, Initial Individual Weight Records as per number of Punches/Stations of the Compression machine have been introduced/Captured.	To improve on clarity of the BMR. To match up with the current practices.	
02	1. To eliminate duplication in the BMR header, introduce page breaks for different process steps and include MFR numbers in the BMR. 2. To include the Line Clearance for Inspection and Sorting of Blisters/Strips and the Secondary Packing Procedure.	To improve coherence of the BMR To ensure maximum elimination of blister/Strip defects before packing.	
03	1. Batch Release sheet revised to ensure that batch release is Authorized by the Company Pharmacist/Pharmacist In-Charge. 2. Shipper weight verification record introduced. 3. Packaging Material Requisition Sheet incorporated in the BMR.	To comply with regulatory requirements for batch release. To eliminate the risk of having less or more product quantity in a shipper
