PRODUCT DETAILS				

Label Claim	:	Each Kamadol Tablet Contains: Paracetamol BP 500 mg Colour: White
Shelf Life	:	3 years
Storage Conditions	:	Store in a cool & dry place. Protect from direct light, heat and moisture.
Mfg. License Nos.	:	NDA/MAL/HDP/1887
Brand Name /Product Name	:	Kamadol
Required Batch Size	:	800,000 Tablets
Market	:	Domestic/Local
Average weight (Uncoated)	:	591.1mg
Dissolution	:	Not Less than 70 % for each Tablet
Assay:	:	Percentage Limit (95.0 % to 105.0 % of the Label claim)

GENERAL INSTRUCTIONS

1. Use approved Equipment only, mentioned in respective stages of the BMR.
2. All Equipment for use must be duly cleaned as per respective SOPs and approved by QA.
3. Each container, machinery or Equipment must bear Status indicating label, duly signed by the person responsible.
4. All Equipment used, must have appropriate safety measures.
5. Care should be taken to ensure that all manufacturing Operations are performed as per the process under supervision of competent technical staff, workers should wear nose masks, and clean gloves, gowning throughout the manufacturing and packing operations.
6. Ensure that all the ingredients have Release labels for intact containers and proper A. R. Nos. for loose containers.
7. Ensure the materials are dispensed and checked as per respective SOPs and FIFO / FEFO system is followed.
8. Dispensing materials should be performed in presence of three qualified people, 1 from stores, 1 from Q.A. and 1 from production.
9. Observe the atmospheric conditions mentioned at various steps, in the BMR.
10. Dispensing labels shall be affixed with BMR.

SAFETY PRECAUTIONS

1. Safety Precautions to be taken to avoid explosions in FBD during drying.
2. Safety Precautions must be taken during grinding, milling, granulating process.
3. Protect Respiratory Organs by using cloth masks and gloves during manufacturing process.
4. Store all granules and tablets in well closed container lined with double polybags.
5. Follow personal hygienic requirements.
6. To avoid any accident, check the earthing and continuity of electricity while operating the machine.
7. Check the safety mechanisms at the start of the operations, at the end of operations, after power failures and any breakdowns of the machine.
8. **Material Transfers:** -Transfer all the dispensed materials from stores to manufacturing areas. Counter-check and record identities and weights of all the ingredients received. Do not use any material which does not comply with weight or analytical report (AR) numbers.

Storage of Materials: -Store the material, in process material, semi-finished and finished material in designated area properly labeled mentioning status of the material and batch details.

NOTE: Ensure all the SOPs used for references in the BMR are of current versions.

MIXING/GRANULATION				

There are four lots of material for this batch, for each perform the following:

A. DRY MIXING

- In clean stainless steel Rapid Mixer Granulator, add in sequence:
 - 100kg of Paracetamol**
 - 10kg of Maize Starch**
- Dry blend at SLOW speed in Rapid Mixer Granulator for 10 minutes then at FAST speed for 5 minutes.

RMG NUMBER:											
Lot	Speed	Impeller Speed [RPM]	Chopper Speed [RPM]	Started	Completed	Actual Time Taken (min)	Time Specified (min)	Deviation (min)	Done by	Verified by SPV	Confirmed by QA
1	Slow										
	Fast										
2	Slow										
	Fast										
3	Slow										
	Fast										
4	Slow										
	Fast										

B. WET MIXING

Prepare starch paste as follows:

- Boil 25.0 litres of purified Water in stainless steel vessel.
- Meanwhile, add in sequence in a clean stainless steel mixing vessel.
 - 8 litres of cold purified water**
 - 150g of Methylparaben**
 - 8kg of Maize Starch**
- Mix until smooth uniform slurry forms.
- Add hot boiling water to the slurry while vigorously stirring. A smooth uniform paste forms.
- Add the paste in 6 to the dry blend in 2 and mix at SLOW speed for 3 minutes then at FAST speed for 3 minutes.

10. Let the granules cool to room temperature then mill with Milling machine fitted with sieve size 4.

QA REPORT

11. Loss on Drying: Check the moisture content in the granules:

Sample: Take 20g of dried granules and operate the moisture balance as per SOP.

Specifications: LOD Limits (%): **1.60- 3.60**.

Acceptance criteria: % LOD should comply with specification:

Test Time	Lot no.	Drying Temp.(⁰ C)	Drying duration (min)	FBD no.	Moisture Balance ID	LOD (%)	Remarks	Done by QA (Sign & Date)

Attach the slip from the moisture analyzer.

Release procedure: Yes / No

If the above tests fall within the specified limits, QA fills out the results in the above table and the material is sent to the next processing stage.

Rejection procedure: Yes / No

If the material fails any of the above tests, QA fills out and labels the RMG bowl with "REJECTED / REWORK" label and the material is sent for reworking.

BLENDING/LUBRICATION					

Intermediate Sample for moisture content and homogeneity of blended / lubricated granules.

5. Take samples of blended granules as per SOP for sampling blended / lubricated granules and send them to QA lab along with this record.

Quantity sampled	Top.....g	Middle.....g	Bottom.....g
Sampled by QA			

QA REPORT					
Test	Specification	Moisture Balance ID	Top Sample	Middle Sample	Bottom Sample
LOD by IR moisture balance (%)	1.6-3.6				

The samples **Comply** ☐ **Do not comply** ☐ With the above specifications.

QA Officer: (sign)..... Date.....

Release procedure: Yes / No

If the above tests fall within the specified limits, QA fills out and labels the blender with "PASSED" label and the material is sent to the next processing stage.

Rejection procedure: Yes / No

If the material fails any of the above tests, QA fills out and labels the blender with "REJECTED / REWORK" label and the material is sent for reworking.

Previous product:		Batch No:		
BEGINNING ACTIVITIES: The following must be checked to ensure adherence to GMP requirements.		Done by Operator (Sign & Date)	Checked by Supervisor (Sign & Date)	Verified by QA (Sign & Date) Status
1. Area cleaning as per SOP.				
2. Ensure that all the previous product containers, material, and labels are removed from the manufacturing area.				
3. Gowning procedure is followed.				
4. Ensure that status board is displayed mentioning Product Name, Batch No, B. Size, Mfg. Date, Exp.Date & Status with sign & date.				
5. Check the proper cleanliness of the Air Supply and Return grills.				
6. Ensure that the Compression Machine, Dies and Punches, Metal Detector/Deduster, Scoops etc. are cleaned.				
7. Check and ensure that Balance Calibration & Verification records are updated.				
8. Ensure Environmental conditions are met as per SOP. Temperature NMT 28 °C _____ Relative Humidity (40-65)% _____				
Remarks:				
ENDING ACTIVITIES: The following must be checked to ensure adherence to GMP requirements		Done by Operator (Sign & Date)	Checked by Supervisor (Sign & Date)	Verified by QA (Sign & Date) Status
1. All material from current product have been removed.				
2. All facilities have been cleaned and labeled.				
3. The area has been cleaned and labeled.				
4. All paperwork for the current batch has been completed.				
5. Reconciliation of current batch has been done.				
6. Machine(s) has been checked for cleanliness.

TABLET COMPRESSION				

6. INITIAL COMPRESSION MACHINE SETTING INSTRUCTIONS:

NOTE: Collect the tablets of first three rounds and discard as non-recoverable residues.

1. Run feeder for one minute.
2. Set the weight of tablets as per limits given above by turning weight dossier anticlockwise for increasing weight and clockwise for decreasing weight & discard the tablets.
3. Check the weights of 20 tablets in group. Set weights by turning the weight dossier anticlockwise for increasing the weight and clockwise for decreasing the weight. Check total weights of twenty tablets three times & record. Calculate Average weight. Check the individual weights of all punches and record.
4. Initially check thickness of all stations tablets each side and during process.
5. Initially check hardness of all stations tablets each side and during process.
6. Check friability, disintegration time and individual weight variation of tablet.
7. Collect fresh samples after complete setting of parameters and visually inspect for any defects.
8. If it is found satisfactory then proceed for further process and verify all in process parameters and record as per next table.

TABLET INSPECTION & SORTING				

INSPECTION AND SORTING PROCEDURE

1. Ensure that the inspection area and equipment are clean.
2. Ensure that all personnel are properly dressed in protective garments, gloves and masks.
3. Carry out a line clearance exercise as per SOP for line clearance and complete the "beginning activities" section of the record.
4. Bring the tablets inside the sorting room.
5. Visually inspect the tablets for defects such as chipping, spots etc.
6. Collect all rejected tablets in properly labeled designated containers.
7. Seal inspected tablets in polythene lined drums and properly label the drums.
8. Complete the "Ending activities" section of the line clearance form.
9. Transfer inspected and sorted tablets to Packing area/Semi-finished product quarantine (SMFPQ) store.

PACKAGING				

1. PACKING PROCESS & INSTRUCTIONS

BULK PACKING

1. Ensure that the packing room, packing equipment and packing table(s) are clean.
2. Carry out a Packing line clearance exercise as per SOP for line clearance and complete the "beginning activities" section of the record.
3. Bring in the appropriate packaging material.
4. Check the labels for correctness and legibility of coding.
5. Bring in the tablets to be packed.
6. Count/Weigh the tablets.
7. Put the tablets in poly bags and seal.
8. Place the sealed poly bag in the container and firmly place the cap.
9. Re-check the batch no., mfg. date and exp. date on the labels.
10. Carefully label the container.
11. Pack the right number of containers in the appropriate corrugated shipping cartons.
12. Seal the shipping cartons with packing tape.
13. Label the shipping cartons appropriately.
14. Complete the packing records.
15. Complete the "Ending activities" section of the packing line clearance form.
16. Transfer packed goods to Finished Goods Quarantine Store and wait for QC report.

BLISTER PACKING

1. Ensure that the packing room, packing equipment and packing table(s) are clean.
2. Carry out a Packing line clearance exercise as per SOP for line clearance and complete the "beginning activities" section of the record.
3. Bring in the appropriate packaging material.
4. Set and operate the blister packing machine as per SOP for operating blister packing machine.
5. Check the first code for correctness and legibility of coding.
6. Bring in the tablets to be blistered and complete the operation and transfer all those blisters to secondary packing area.
7. Pack 10 blisters per unit carton/ 100 blisters per unit dispenser.
8. Pack 150 unit cartons in the corrugated shipping cartons.
9. Pack 24 dispenser in the corrugated shipping cartons.
10. Seal the shipping carton with packing tape.
11. Label the shipping carton appropriately.
12. Complete the packing records.
13. Complete the "Ending activities" section of the packing line clearance form.
14. Transfer packed goods to Finished Goods Quarantine Store and wait for QC report.

INSPECTION AND SORTING OF BLISTERS AND STRIPS

INSPECTION AND SORTING PROCEDURE

1. All personnel involved in Inspection, Sorting and Packing shall be qualified annually with eye vision checks (Ocular Test), colour-blindness checks, and ability to distinguish known product rejects from acceptable products.
2. The medical examination of all Inspectors/Sorters and Packers should include the report of proper vision with or without glasses and Color blindness.
3. The production Inspectors/Sorters and Packers who feel uneasy or complain of headache are unfit for handling Inspection, Sorting and Packing of Blisters/Strips.
4. Inspectors/Sorters who are employed for checking strips and blisters or overprinted materials shall be replaced with other trained checkers alternately after every four hours or a break of at least 30 minutes shall be taken to counter eye fatigue and complacency.
5. Before the start of any batch, line clearance should be done as per SOP for line clearance.
6. Bring the strips/blisters to the secondary packing room.
7. Visually inspect/Check the strips / blisters / coded materials for all the possible defects. Some examples of types of rejection on packing line are Coding rejection, Due to text matter/hologram/smudging of ink over printed foil, Rejected strips due to cutting, Empty pocket rejection, Pocket puncture rejection, Sealing rejection, Overheated strips/blisters, Chipped / capped / broken tablets, Improper forming of blisters, Improper appearance / absence of hologram in the final blister strip among others.
8. After the Inspection and Sorting operation, the Supervisor shall intimate to the QA Officer online to verify the integrity of the sorted blisters/strips and approve packing to start.
9. Remove all defective blisters/strips, place them in a polybag or drum and label as recyclables. These should be de-blistered/de-stripped once sorting and inspection of blisters is done.

SECONDARY PACKAGING				

SECONDARY PACKING PROCEDURE			
1. Check the specimen attached to the BMR of overprinted carton/Monocartons, leaflet, and shipper label if it has been checked by the line supervisor and approved by the QA Officer online. 2. Transfer previously approved overprinted packing material from the printing room to the secondary packing room. 3. Check if displayed details on the carton/Monocartons/dispensers of the batch number, manufacturing and expiry date are as per BMR/BPR. Check carton for overprinting intactness. 4. Check if the information on leaflets/inserts is clear, legible and specific to the product to be packed. 5. Open the carton and insert leaflet with number of strips/blisters as specified in the BMR. Close the carton and arrange it into the shipper. 6. Once the shipper is filled with the number of cartons as specified in the BMR, insert a fully filled packing slip with name of the product & batch number, the name of the packing personnel and this should be checked and signed by the group leader. 7. Group leaders should check the shipper to ensure that it has the correct quantity of cartons/Monocartons/dispensers. If this is okay, group leader shall sign the packing slip and intimate to the Supervisor and QA Officer online to confirm the correctness of the quantity in the shipper and other packing requirements. The Supervisor and the QA officer shall then sign on the packing slip and authorize the group leader to seal the shipper with BOPP tape and attach the shipper label. Exact quantity of loose shipper is written on shipper label and sealed. 8. Once the entire batch has been completed, transfer to finished product quarantine store. 9. Any leftover printed cartons/Monocartons/dispensers/labels should be destroyed in presence of QA Officer online and the number recorded in the BMR. 10. Transfer leftover packaging material (that is not printed on) to Packaging Material Stores with a return note.

REVISION HISTORY			

REVISION NO.	CHANGES INCORPORATED	REASON OF CHANGE	EFFECTIVE DATE
01	- KPI new logo to be incorporated - The provision for BMR preparation, Review, Approval and Authorization have been introduced on the Master Formula Page(s). - An Index has been introduced. - The Abbreviations used in the BMR have been defined in full. - List Of Equipment & Instruments used in product manufactured have been summarized. - Line Clearance for Dispensing previously missing has been introduced. - Documentation of First Drying, Second Drying, and Final Drying have been split and captured independently, and Milling activities including Sieves used plus LOD data are also being documented at granulation. Identity of the FBD used to dry a particular Lot has been captured. - In-process Quality Control and Assurance (IPQC/IPQA) reports for both Production and QA at all stages (as appropriate) have been incorporated. - Initial Compression Machine Setting instructions, Initial Dies and Punches Checking Record, Initial Individual Weight Records as per number of Punches/Stations of the Compression machine have been introduced/Captured.	To improve on clarity of the BMR. To match up with the current practices.	
02	- To eliminate duplication in the BMR header, introduce page breaks for different process steps and include MFR numbers in the BMR. - To include the Line Clearance for Inspection and Sorting of Blisters/Strips and the Secondary Packing Procedure.	To improve coherence of the BMR To ensure maximum elimination of blister/Strip defects before packing.	
03	- Batch Release sheet revised to ensure that batch release is Authorized by the Company Pharmacist/Pharmacist In-Charge. - Shipper weight verification record introduced. - Packaging Material Requisition Sheet incorporated in the BMR.	To comply with regulatory requirements for batch release. To eliminate the risk of having less or more product quantity in a shipper
